
Research Center for Policy Analysis

The Center performs study and analysis of policies related to scientific and technological innovation, ranging from the building of R&D infrastructure and R&D promotion to program design to realize the intent of policies, which are prerequisites for innovative research and enhancement of socio-economic added values.

It also identifies complicated problems in today's multicultural world, conceives desirable future, and proposes solutions from flexible and robust viewpoints.

- Study of R&D management for generating innovations
- Study and implementation, or support of implementation, of methodology for design and evaluation of strategy
- Study and analysis of research innovation policies and support of development, domestic and overseas
- Study and analysis of policies related to sci-tech and education and support of development, domestic and overseas
- Planning and support of renewal of cities and communities
- Community-based R&D strategies
- Implication of future study to the trends in technology and society
- International strategy focused on technological trends
- Space development policy in transition
- Governance of big technology
